Art Unit: 3723

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, 12-13, and 23, drawn to a flexure, classified in class 428, subclass 411.1.
- II. Claims 8-11, drawn to a method of manufacturing a flexure, classified in class 156, subclass 60.
- III. Claims 14-22, drawn to a latch, classified in class 269, subclass 254.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the flexure of group I could be manufactured by another process not requiring heat and pressure. The flexure of group I could be manufactured by adhesive bonding.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a flexure having a plurality of piles. The subcombination has separate utility such as a spring for a door.

Art Unit: 3723

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
